

Triad Pro Innovators Inc (OTCMKTS:TPII)

There is no doubt that the electricity storage industry has grown at a remarkable pace over the course of the past few years and nowadays there are a wide range of companies which are jostling for becoming prominent players. Hence, it is perhaps no surprise that a large number of investors are now looking to get into the space and make a killing through investments in such companies.

The number of companies remains quite high and ultimately only a few are going to be successful in the long run. One of the companies that could be worth looking into at this point in time is **Triad Pro Innovators Inc (OTCMKTS:TPII)**. It is one of the better-known companies in the sector at this point in time and this report seeks to provide investors with a closer look into the company's products, its working, and the rationale behind the possibility of investing in the stock.

About Triad Pro Innovators

At this point in time, Triad Pro Innovators Inc (OTCMKTS:TPII) is best known for having managed to develop a proprietary device that

can help in the storage of electricity for a large number of circumstances. The company noted that the power supply device has been a godsend for its storage system and has provided considerable operational efficiency.

The device in question is run by the company's own proprietary software and hardware solutions. Perhaps it is more pertinent to note that the eCell product has the capability of storing electricity

RECENT NEWS

January 24, 2022 / Triad Pro Innovators, Inc. is pleased to provide an update to its shareholder outlining the company's achievements over the past year, and giving an outline of its plans for 2022.

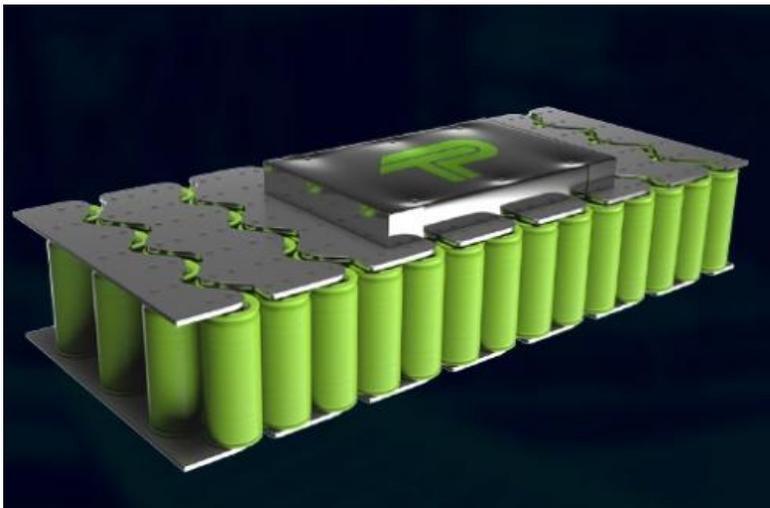

December 16, 2021 / Triad Pro Innovators, Inc. (OTC PINK:TPII) is pleased to update all shareholders on its MOU with One World Ventures, Inc.(OTC PINK: OWVI), as announced in November. Triad Pro Innovators to develop energy storage solution for 100-megawatt crypto mining facility.

Dec. 8, 2021 /-- Triad Pro Innovators, Inc. is pleased to announce the successful conclusion to the first Canadian tour of its EEL Diesel Hybrid Genset. Recently introduced, the EEL Diesel Hybrid Genset has rapidly attracted the interest of major Canadian oil, mining, and construction companies. Uniquely placed in the market due to its eCell's

at an unlimited rate and that rate can only be limited by the state of the network that might be providing the electricity. The stored electricity is then released in a steady and regulated way depending on the circumstances of the usage. This is an important aspect of the eCell since this sort of operational flexibility is not offered by battery storage systems that are chemical-based.

However, at the same time, it is also necessary to point out that the company is involved in the development and manufacturing of other products as well. Triad Pro is also heavily involved in the development of a range of renewable energy solutions and one of these is Co-Generation. The company is still awaiting the patent for the eCell electricity storage product.

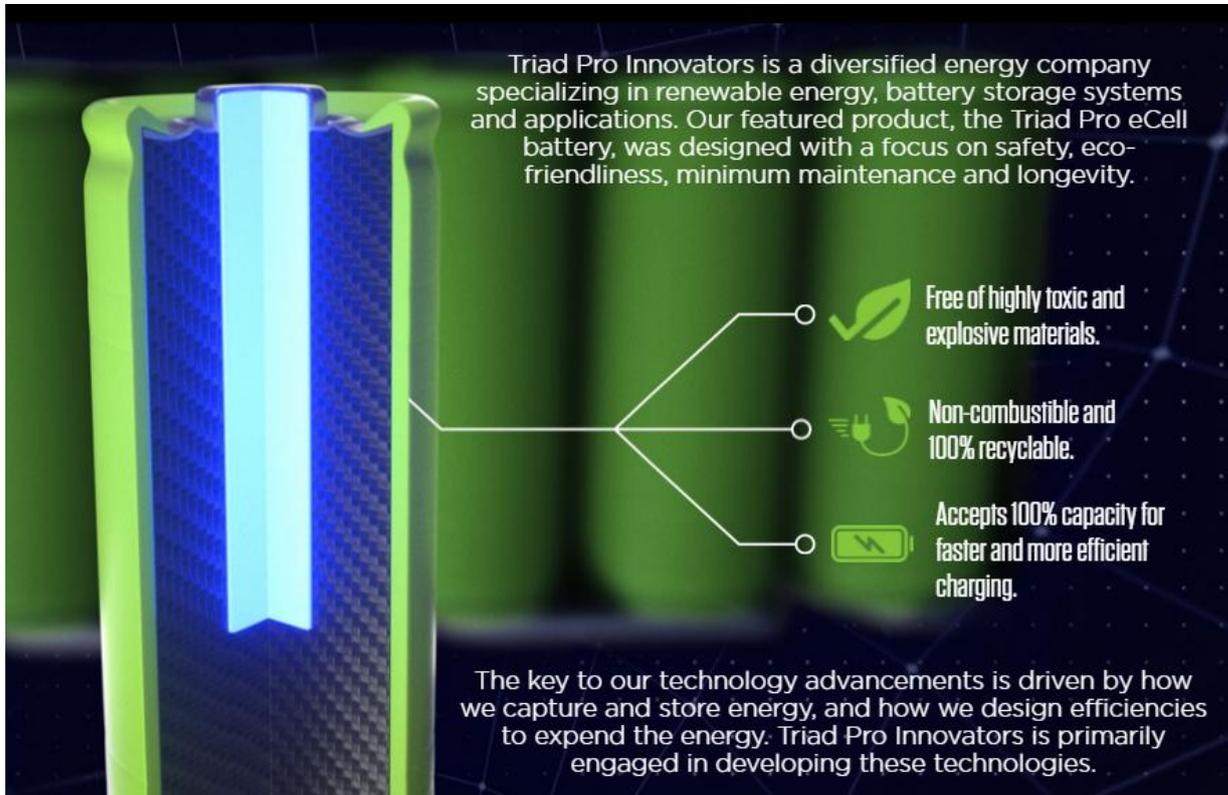

Triad Pro may be in a strong position.

RECENT NEWS (Contd.)

ability to continue performing in extreme cold temperatures (tested to -49°C), the EEL Genset is the first product in its class that can meet the demands of remote communities and commercial operators in the harsh winter climate of Northern Canada.

In other words, Triad Pro is a fairly diversified entity at this point in time but its specialty remains its work battery storage systems, renewable energy, and associated applications.

The company's technological strategy is laser focussed on the ways in which it can find better ways to capture and then store electricity. The eCell product is proof of the sort of work that the company has managed to do in this regard. At the end of the day, the prospects of a company also depend on what the future holds for the industry, and in that context,

Triad Pro Innovators is a diversified energy company specializing in renewable energy, battery storage systems and applications. Our featured product, the Triad Pro eCell battery, was designed with a focus on safety, eco-friendliness, minimum maintenance and longevity.

-  Free of highly toxic and explosive materials.
-  Non-combustible and 100% recyclable.
-  Accepts 100% capacity for faster and more efficient charging.

The key to our technology advancements is driven by how we capture and store energy, and how we design efficiencies to expend the energy. Triad Pro Innovators is primarily engaged in developing these technologies.

Renewable energy storage is a growing market and at this point in time, the demand for such storage devices are quite high. The company seeks to diversify its battery offerings in a big way in the coming years and hence, that is another factor that is certainly going to be at the back of the minds of many investors.

Industry Analysis

Now you must have a pretty fair idea about the nature of Triad Pro Innovators as a company, it is perhaps good now to take a closer look at the industry in which the company is involved. Ultimately, if the industry in question does not grow then all the innovative work from the company is not going to count for much. Hence, it is important for potential investors to consider taking a look at the prospects of the global energy storage industry in order to have a better idea about Triad Pro.

As mentioned earlier, the global demand for green and renewable energy storage is at an all-time high at this point in time and it is expected to go up. In this regard, it is also necessary to point out that large enterprises, governments in different countries, and even local government bodies like municipalities are the principal movers.

In this context, it is perhaps necessary to take a look at the predictions that have been made by Bloomberg New Energy Finance and get a clearer idea about the future of the energy storage industry. It was reported by Bloomberg New Energy Finance that energy storage is

going to enjoy the same sort of explosive growth that had been witnessed in the solar energy sector in the years from 2010 through 2015. During this period the solar sector grew at a staggering rate of as much as 700%. From 2016 to 2017, the energy storage market had grown at an impressive 46%, however, Bloomberg predicted that the growth rate was going to be ninefold in the years between 2017 and 2022.

However, it may be important to look a bit farther into the future if one has to have a clearer idea about the Triad Pro-stock. In 2020, the worldwide energy storage industry had clocked a valuation of as much as \$10.37 billion and that is pretty hefty market size. However, a report from Mordor Intelligence stated that the market is going to grow at a fairly brisk clip of 19.9% in terms of Compound Annual Growth Rate in the period between 2022 and 2027.

That being said, it is also necessary to keep in mind that the coronavirus pandemic had led to a significant economic collapse and that had affected the renewable energy storage industry as well in a big way. Spending on things that were deemed non-essential dipped and actual retail customers were not particularly keen to spend either. That led to a vicious cycle. However, the sector may be on the verge of bouncing back now that the effects of the pandemic have eased and that is something that could prove to be a significant long-term positive for companies like Triad Pro.

Investment Highlights

Merely knowing about the company's work and the prospects of the industry is perhaps not the right way of going about the whole thing. At the end of the day, one needs to be more focused on what the company in question has been doing in recent times in order to bring about consistent growth. This section of the report is going to look into the range of significant developments with regards to Triad Pro that investors need to keep in mind when they consider the stock.

A. Impressive Plans for 2022

When a company charts out its plans for a year then it is something that investors almost always like. It indicates that the company is serious about its growth. Last month, Triad Pro Innovators came into focus among investors after it made an announcement with regards to its achievements over the previous year and also laid out its plans for 2022. Murray Goldenberg, the Chief Executive Officer of the company noted that 2021 had actually been a 'pivotal year' for Triad Pro.

He went on to state that in 2021 the company was mainly involved in putting in place the 'pillars' that are expected to propel the next stage of growth for Triad Pro. Goldenberg went on to state that the pillars are going to provide the support for the further expansion of the company in 2022. Those were highly bullish statements and it is quite likely that the comments were noted by both analysts as well as investors. In 2021, the company managed to strengthen its financial situation and one of the more important was to turn \$270000 worth of debts into equity.

That completed the elimination of all debt. The CEO also noted that 2022 is going to be all about taking advantage of the 'pillars' that have been put in place and then scaling up its business in a big way.

B. Crypto Mining Business

While it is true that the company is involved primarily in the renewable energy storage space, it has also diversified into some other sectors. One of the major sectors that Triad Pro has moved into is the highly lucrative cryptocurrency mining sector and that is something that could be of significant interest for investors. It was back in November last year that the company had announced that it had entered into a Memorandum of Understanding with the company One World Ventures Inc regarding a crypto venture.

Later on in December last year, Triad Pro announced the nature of the agreement with One World Ventures. As per the provisions of the agreement between the two companies, Triad Pro is going to be involved in the development of the energy storage solution that is going to be in place at the 100-megawatt facility operated by One World Ventures. It was a significant move from the company and one that could eventually lead to more business in the crypto sector for One World. It may be a good idea for potential investors to keep track of this particular project over the course of the coming weeks.

C. Successful Canadian Tour

December was a pretty eventful month for Triad Pro Innovators and one of the highlights of the month was the successful completion of the inaugural tour of Canada for the company's EEL Diesel Hybrid Genset. The product in question had been introduced not too long ago by Triad Pro when it went on that tour to Canada. However, the tour turned out to be a major success as the EEL Diesel Hybrid Genset managed to garner significant interest from companies in the construction, mining, and oil sectors in Canada.

In addition to that, Triad Pro innovators pointed out that the capabilities of its eCell product have been particularly appreciated by those above-mentioned sectors. The eCell can continue to perform at optimum levels even when temperatures are extremely cold and that is something that may have brought interest from oil and mining sector companies in Canada.

D. Golf Carts Update

Another major development with regards to Triad Pro Innovators in December 2021 was the update provided by the company with regards to the distribution, sales, and production of its solar-powered SPREE golf carts. It should be noted that those golf carts are the first-ever solar powered ones in the world. The company noted that SAN Tan, a distributor of the golf carts based out of Phoenix had signed up in the role back in September 2021.

More importantly, the distributor had revealed that the demand for the SPREE golf carts had been highly positive. As of December 2021, San Tan had started accepting the delivery of the golf carts and was eager to receive more.

It had been announced at the time that the demand for the golf carts stood at 300 a year at that time. This is a product category that could eventually be an important one for Triad Pro and especially so since the company managed to come up with the world's first such golf cart. Potential investors could do well to keep an eye on it.

E. More on the One World Ventures Deal

It was back in November last year that Triad Pro had first made an announcement with regards to the signing of the Memorandum of Understanding with One World Ventures. At the time it was announced that Triad Pro was going to provide an energy storage solution for the Bitcoin mining activities of One World Ventures. A month later the actual details of the deal were announced. It could be one of the most important collaborations for Triad Pro at this point in time and it is something that investors could consider following closely.

As you can see, Triad Pro Innovators is a company that may be on the right track as far as its operations are concerned. It has moved into highly innovative businesses but all of that is backed up by solid expertise in new-age advanced technology and sound decisions.
